Chronic Ulcers Mean Bad Blood

If outside influences were responsible for chronic ulcers, then external applications and simple cleanliness would be a curative treatment. But the trouble is always in the blood which has become unhealthy and diseased, and keeps the sore open by continually discharging into it the impurities and infectious matter with which the circulation is filled. Salves, washes, lotions, etc., may cause the place to scab over temporarily, but the blood is not made purer by such treatment, and even the old inflammation and discharge will return and the sore be as bad or worse than before. Nor will removing the place by surgical operation insure a cure; the cause still remains in the blood and the sore is bound to return. S. S. S. heals old sores by going down into the blood and removing the impurities and germs which are responsible for the place. S. S. S. thoroughly purifies the circulation and in this way destroys the source of every chronic ulcer. In addition to purifying the blood, S. S. S. enriches this vital fluid and in every way assists nature in overcoming the bad effects of a chronic ulcer. Book on Sores and Ulcers and any medical advice free. **THE SWIFT SPECIFIC CO., ATLANTA, GA.**

SCHOOL

Work in the Philippine Islands is Making Rapid Progress.

WASHINGTON, Sept. 6.—Under the leadership of American educators, Philippine education is making a remarkable advance. Indeed, according to recent reports received at the United States bureau of education, there are features of present-day education in the Philippines that are worth the careful attention of school leaders in the United States.

It is in the field of industrial training and useful arts that the Philippines, under American teachers, are making the most notable progress; such progress, in fact, that in certain lines—particularly lace-making and embroidery—the products of the Philippine schools not only compare favorably with the work of the famous French and Swiss experts, but promise to compete with them successfully in the world's markets.

The whole system of education in the Philippines is based on the principle that the children should receive training that will prepare them directly for the life they are to live. The boys receive manual training from the very beginning. In the lowest grades, they make articles that they can use and sell, both in their own localities and elsewhere. The most important industry taught the boys is hat weaving. It is a prescribed exercise in the primary schools. "The bureau of education at Manila considers it one of its legitimate functions to give such training in the making of good hats as will afford a large number of children a permanent means of livelihood," wrote Mr. Frank R. White, director of Philippine education, in 1910, after the courses had been introduced and the development of the work has more than justified his claim. Chief among the products are the famous "bustal" hats made from the leaf stem of the opened buri leaf. The schools do not attempt to replace hand machinery with modern apparatus, for it is recognized that there is a general demand for the products of careful handworkmanship. Besides the present courses in the primary schools there are regular trade schools where the boys spend the greater part of the school day in actual manual labor in the shops. A set of dining room furniture in red narra, made at the Philippine school of arts and trades in Manila, sold for \$200 at last year's carnival.

In the girls' schools plain sewing and housekeeping have generally formed the prescribed courses, but recently lace-making and embroidery making have been introduced because they are arts which besides possessing educational value furnish the girls with a remunerative occupation. There were already in the Philippines young women who had learned embroidery and lace-making in the convents under the Spanish regime. Furthermore, because of their great natural aptitude for such work, and because of their patience and delicacy of execution the Philippine women are considered among the most skillful workers in the world in these arts, their products being classed by experts as even superior to that of the French and Swiss. The schools are therefore working on sure ground in lace and embroidery making and they have ascertained that the demand for the kind of work their children can turn out is practically unlimited. In an effort to increase

the available supply of teachers for the work, courses in lace and embroidery making have been offered in the Philippine normal school since 1910 and also in the various vacation assemblies of teachers.

The first thing a Filipino girl does in the sewing class in school is to make for herself a complete outfit of clothing. This work she usually begins in the second grade, but sometimes in the first or third. Armed with an embroidery frame and other apparatus (in most cases made by the boys in the same school), she advances in proficiency through the various grades, hemming and embroidering cotton squares, fine linen handkerchiefs, waists, and so on. The most expert girls turn out masterpieces in French net and embroidery. In lace they make all varieties of pillow lace, including torchon (Spanish lace), Maltese, Ceylon or India, Irish crochet, etc. Battenburg is also made for local use, but it is not so encouraged for export because the Japanese can make it more cheaply.

An idea of the extent of industrial education in the Philippines may be gained from the fact that nearly 400,000 school pupils are engaged in some kind of industrial work. For the last four years industrial instruction has been prescribed in the primary course for both boys and girls, and the work is systematically carried on in an advanced stage in the intermediate schools. Twenty-six well equipped trade schools have been established in Manila and the various provinces; there is a college of agriculture at Los Baños and a college of engineering has been added to the university of the Philippines. The bureau takes to the educational program, industrial and otherwise, quickly and profitably; and the civil government finds its duties much less onerous now that the military invasion of the island has been superseded by the educational.

BRIDGE

Iron for the Clarksburg Northern Railroad is Arriving.

Colonel Joseph Fuccy, president of the Clarksburg Northern railroad in course of construction, came in last night from New Martinsville, accompanied by Russell Fuccy, his nephew, who will leave Sunday night for Rock Hill college. President Fuccy stated that two carloads of iron arrived yesterday for the bridge across Fishing creek and that the work of constructing the road is progressing nicely.

Praise This Remedy For Consumption

If the voluntarily written words of grateful people living in all parts of the country, praising Beckman's Alternative, a remedy for the treatment of coughs, colds, throat and lung troubles, are to be believed, this medicine is certainly doing a vast amount of good for such sufferers. We state none but facts, and give to you the names and words of praise of those who have always benefited them—in many cases cured with the written statement that it restored them to health. This is a sample taken from many: St. Mary's Academy, O'Neill, Nebraska. "Gentlemen:—About seven years ago I was attacked with the dread disease, Tuberculosis. I coughed incessantly, could not sleep nor eat, even could not speak out loud and could do no work. I had three hemorrhages, raised blood most of the time and suffered of night sweats, fever and chills. A specialist of Columbus, Ohio, pronounced my case hopeless. Nearly five years ago I heard of your Alternative and procured some at once. With the result that I soon found myself restored to health. For the past four years I have been able to continue my teaching, and though I have always had heavy school work, I am also able to perform much manual labor. I consider your medicine, if faithfully taken, a most excellent remedy for Consumption. Mother Superior permits this testimony. (Signed) SISTERS MARIE, BECKMAN'S Alternative who cures in Bronchitis, Asthma, Hay Fever, Throat and Lung Troubles, and in upbuilding the system, does not contain poison, opiates or habit-forming drugs. Ask for booklet telling of recoveries and write to Beckman Laboratory, Philadelphia, Pa., for evidence. For sale by all leading druggists.
